

Industrial Fiber Optic Communication Control

Explore how custom fiber optics from FSI optimize industrial processes--offering fast, EMI-resistant data and robust performance in harsh factory conditions.

The industrial control data link product line incorporates high-performance, reliability, long-wavelength optical devices, and proven circuit technology to provide long life and consistent performance.

Whether you're looking to automate a new process, upgrade an existing system, or install a reliable communication network, we have the expertise to deliver the right solution.

Our fiber solutions provide cost-effective ways to monitor and control electrical signals: As transportation systems become more sophisticated, safety considerations define future specifications. Compliance ...

Industrial automation fiber optics and PROFINET integration form the backbone of Industry 4.0, enabling real-time control and deterministic communication in smart factories. This ...

Many industrial locations have intelligent device monitors and other remote equipment that need to be linked within the system. A fiber network can also provide centralized communication between the ...

Walk into any modern manufacturing plant, and you'll face a critical challenge: how do you reliably transmit real-time data from hundreds of sensors spread across kilometers of factory floor to a...

What distinguishes fiber optic solutions for Industry 4.0 manufacturing environments? Industrial fiber optic networks must withstand extreme environmental conditions, enable deterministic ...

With the patented digital diagnostic capabilities on the trans-ceivers, the Ethernet Switch can monitor the link characteristics, such as receive optical input power, and provide early warning alarms to ...

Discover the critical role of fiber optics in industrial automation, revolutionizing control systems with their high-speed data transmission capabilities and durability in harsh conditions.
