

Network topology of optical module switches

To support dynamic data center workloads efficiently, however, it is critical to switch between wavelengths at nanosecond (ns) timescales. Here we demonstrate ultrafast OCS based on ...

Plexxi switches are basically interconnected in a ring topology using LightRail optical multiplex-ing technology. The main advantage of this approach is that it replaces traditional switched hierarchies ...

This survey paper reviews the most recent advancements in various types of optical switches, including those based on Micro-Electromechanical Systems (MEMS), Silicon Photonics, ...

The direct-connect architecture is coupled with network management, traffic and topology engineering techniques that allow Jupiter to cope with the traffic uncertainty, substantial fabric heterogeneity, and ...

Project Apollo is focused on replacing the traditional "Clos" architecture, which uses EPS with Optical Circuit Switch (OCS). The first generation optical switch is called Palomar. These OCS ...

This document describes the Gigabit Passive Optical Network (GPON) technology and how it functions.

The XPO pluggable module preserves the advantages of field pluggability, enabling quick replacement or upgrades of optical modules without servicing the entire switch and minimizing downtime. It also ...

While partially-configurable optical switches deliver many physical layer benefits, they cannot be used in conventional network topologies (e.g. folded Clos), which are based on nonblocking crossbar switches.

Network chip and equipment manufacturers, including Broadcom, have been exploring and promoting CPO technology for many years. Its core concept is to move the optical components from traditional ...

In this paper, we present a review of optical switching techniques capable of meeting the requirements of the next generation of large-scale data center networks.

Take a look inside NVIDIA silicon photonics-based networking switches that simplify manageability and design, enabling more power for compute infrastructure and delivering the scale needed to enter the ...

Network chip and equipment manufacturers, including Broadcom, have been exploring and promoting CPO technology for many years. Its core concept is to ...
