

# Passive Optical Components and Modules

Optical passive components from individual isolators, couplers and PM components, to multi-function integrated components such as isolator with WDM, isolator with PM Beam Combiner, and circulator.

These components manipulate light signals through processes such as transmission, reflection, polarization, coupling, splitting, filtering, and attenuation. They are essential for directing and ...

High-performance passive optical devices including WDMs, splitters, attenuators, circulators, and photonic components engineered for advanced fiber networks.

FS offers passive optical components & termination equipment to meet flexible optical network needs by fiber signal attenuation, separation, termination, etc.

Learn how non-powered optical devices guide light signals, enabling the reliable, high-speed fiber networks we use daily.

Regardless if FBT or PLC components, we offer them as plain components or integrated in various enclosures. For more details on the integrated versions, [click here](#).

Passive optical modules for mux/demux, attenuation, and switching. Vertically integrated, standards-qualified solutions for data center, metro, and long-haul networks.

Customize, expand and enhance your optical network. To support the varied needs of optical network operators, the Scientific Atlanta Prisma platform includes a wide range of passive devices.

Optical passive components are the quiet workhorses in fiber systems. They don't add gain or require power, but they decide how efficiently, cleanly, and safely light moves through your network or laser ...
