

Pull open the fiber optic cable sheath

This best practices document is a step-by-step guide for end and midspan access of loose tube optical cable, including sheath removal, core preparation, and fiber preparation.

1.1 This practice describes how to remove the sheaths or "jackets" of a Corning Cable Systems MIC 250 cable and prepare the cable's optical fibers for termination. Note: Before attempting this procedure, ...

Fiber optic cable is surprisingly strong, durable and pliable; however, several best practices should be followed to ensure a successful cable ...

Once you ring both areas, place the blade guide between the conductors and the cable jacket and pull, the jacket will pop open, and come completely off the cable. The JIC-4366 can also be used to open ...

The JIC-4366 Cable Sheath Stripper from Jonard is used to ring-cut many types of tight buffer, loose tube buffer, breakout cables and other types of jacketed fiber cables. A slitting blade is built into the ...

For the Corning FASTACCESS fiber optic cable, I will show you how to remove the jacket and prep the cable for terminations.

Insert needle nose pliers into the end of the cable and pull the jacket away. Then twist off the jacket on the end of the cable to start the FastAccess™ feature tear.

This cutter handles Kevlar, cable insulation, tape, and cable ties effectively. The compact 6-inch length makes it portable for fieldwork. Jonard backs the tool with a lifetime warranty, ensuring ...

First, strip the outer sheath of the optical fiber with optical fiber strippers; remove the stripped outer sheath of the optical fiber; and finally, cut the exposed aramid fiber with cable-cutting ...

This instruction manual is a step-by-step guide for end and termination of tight-buffered cable, including sheath removal, core preparation, and fiber preparation.

The instructions in this document explain how to prepare end openings of the Prysmian Figure 8 Fiber Optic Drop Cable for termination. The document also covers applications notes including the use of ...

Slit the 15 cm (6 in.) section of cable sheath by holding the arm which has the knife out straight and pulling the cable "through" the hook blade with your other hand (Figure 4).
