

Simulation of Light-Controlled Protection Switch Circuit

The primary goal of this project is to design a cost-effective and energy-efficient Dark Switch circuit that automatically controls electrical devices based on ambient light conditions. The project includes both ...

In this project, I will show you how to build a simple Light Activated Switch Circuit using LDR. Using this circuit, an electrical device or an appliance like a light bulb or a fan for example, can ...

A set of newly developed modeling and simulation tools aimed at better understanding the design concept and related applications for protective relaying, as well as substation communication and ...

File Edit Draw Scopes Options Tools Circuits +5V <

This video provides a detailed walkthrough of designing and simulating an automatic light control system using Light-Dependent Resistor (LDR) and Triac in Proteus Software.

While simulation is running, you can flip switches, adjust potentiometers, tune LED current limiting resistors, ramp up input voltages, etc. The circuit will immediately respond to your changes, in real time.

The Intro Screen changes as you play with it. It has a Play Area and a Control Area. A Construction Area creates a building space for components added from a Circuit Component Toolbox. Build and ...

CircuitLab provides online, in-browser tools for schematic capture and circuit simulation. These tools allow students, hobbyists, and professional engineers to design and analyze analog and digital ...

Build a light controlled switch circuit using IC LM311 & LDR which is helpful because it responds to different amounts of light around it.

The protection system simulator SIM600 is a general-use simulation and visualization appliance for protection and control systems.
