

What to do if the beam splitter is not responding

My light source is beamed onto a 50/50 beam splitter behind which sits my camera but I cannot seem to eliminate ghosting from the surface of the beamsplitter. I am not getting a usable ...

Unless they are on the same axis they can't be colligned (for my requirements), the only way I can think of to have the system colligned is to use a beam splitter. I am using a dslr lens, so 2 of those side ...

However, to use a metasurface-based beam splitter in real world applications, many problems should be solved such as, low efficiency, narrow operation band, high fabrication cost, and a suitable working ...

While the optical splitter handles the distribution, the optical transceivers are the tireless engines powering the data. For network engineers ...

A beam splitter or beamsplitter is an optical device that splits a beam of light into a transmitted and a reflected beam. It is a crucial part of many optical experimental and measurement systems, such as ...

It is possible to design a beam splitter whose split beams don't have equal amount of light intensity. For example, a 10:90 (RT) beam splitter will provide you with a reflected beam with 10% of ...

Beamsplitters are generally effective at reflecting s-polarization but they are not as effective at preventing p-polarization from reflecting. This occurs because when s-polarized light hits the ...

While the optical splitter handles the distribution, the optical transceivers are the tireless engines powering the data. For network engineers and ISPs, choosing a trusted partner for both ...

Don't worry if you have not seen your beamsplitter. We can refurbish most any beamsplitter you may have. Call us at 603 886-5555 or email us at afuller@ftir for more information.

Beam splitters are devices for splitting a laser beam into two or more beams. There are different types, including polarizing and non-polarizing versions.
